## OFFICE OF RESEARCH AND DEVELOPMENT

## GENERAL NOTICE NO. 23

21 September 1967

- 1. The inauguration of the IPRD as an open shop working facility requires ORD to be concerned in detail with those security aspects peculiar to a current intelligence information processing laboratory. These include as continuing review stems:
  - a. Maintenance of a balance between meaningful intelligence security and the internal creative environment of an effective laboratory; user control.
  - b. Time-shared aspects of security involving third generation machines; memory integrity; information access control.
  - c. Magnetic data records accountability such as cartridges (data cells), discs and tapes.
  - d. Paper tapes and card controls; documentation controls.
  - e. Miscellaneous; alarms; emanations control, etc.
- 2. It is expected that the requirements for security will mutate with usage load, the type usage and the scope of problems. This requires that an on-going, working review of security provisions be reconciled with the month-to-month utilization of the IPRD Laboratory.
- 3. Concurrent with the specific aspects of ADP security in an open shop environment, there will be significant physical security and safety items which it is desired to update on a continuing basis. These include fumes venting, high voltage safeguards, laser usage, along with the usual considerations of a normal laboratory area.

GROUP I

Excluded from automatic downgrading and declassification

Approved For Release 1999/09/27 : CIA-RDP88B00553R000100170022-7
